TEX_G2: Metascape clusters vs consensus themes
M1 Mitotic cell cycle process
M2 Cell cycle
M3 Regulation of cell cycle phase transition
M4 Cellular response to DNA damage stimulus
M5 Activation of NIMA kinases NEK9, NEK6, NE…
M6 Establishment of spindle orientation
M7 Regulation of cyclin-dependent protein se…
M8 Establishment of organelle localization
M9 G1 to S cell cycle control
M10 G2/M checkpoints
M11 Negative regulation of cell cycle
M12 Chromosome maintenance
M13 Regulation of telomerase activity
M14 Female gamete generation
M15 Ubiquitin-dependent protein catabolic pr…
M16 P53 signaling
M17 Termination of translesion DNA synthesis
M18 Mitotic cytokinesis
M19 Negative regulation of protein phosphory…
M20 Sister chromatid cohesion

M#: Metascape cluster, named by its best term
Right of map: consensus tier of that term
